## ANATOMY OF A NETWORK ATTACK

It is essential to train & educate your team on the most relevant network threats and how hackers exploit vulnerabilities to successfully launch their attacks.

This two day course is based on evidential information about cyber security attacks facing various organisations today. This course is based on our experience and interaction with our clients and other industry attack victims.

This course is delivered by a heavily experienced senior leader and trainer. The trainer has extensive knowledge and expertise to manage and deliver a successful workshop and he has experience in dealing with different verticals. Collectively, CMA and its specially selected associates have an excellent track record of delivering engagements, small and large, supporting the Information Security and cyber incident management subjects.

### PREREQUISITES

All attendees should have basic understanding of information technology and must be able to understand the course content from a basic technology point of view.

Explore Attack Manifestations & Scenarios

Active Directory Based Attacks

DNS, APTs, LAN, DDos and DoS Attacks

Triage, Detection & Monitoring

“ I recommend everyone to attend this course whether your business is at the beginning or whether you have already implemented some of the IT security procedures. Even if you think you are protected but in fact it is not protected... ”

*Bir Lama, Network Engineer, Christ the King Sixth Form Colleges London*
