

Certified Training

CYBER MANAGEMENT ALLIANCE

NON-TECHNICAL

CYBER SECURITY & PRIVACY ESSENTIALS

WHY ATTEND?

The Internet brings huge business opportunities and benefits, but it also brings risks. Every day there are cyber attacks on companies like yours, attempting to steal your information and money, or disrupt your business. It is increasingly important to manage these risks to take advantage of the Internet, whilst protecting your business.

The National Cyber Skills Centre is working with Cyber Management Alliance Ltd to deliver a one day immersive masterclass to educate organisations on the cyber threats that they face, the strategic significance of cyber security and its relevance and importance to the modern business. Learn from experienced professionals who are practitioners rather than just trainers and see the world through the eyes of real cyber attackers, while learning how to protect your business.

ABOUT THE COURSE

Cyber Management Alliance's Cyber Security and Privacy Essentials (CSPE) course allows directors and managers to understand business critical risks and issues of cyber security, empowering them to make the right business decisions to reduce their organisation's risk exposure.

YOU WILL LEARN

- Strategies to protect business reputation, brand image and the bottom line in cyberspace.
- How to cost effectively manage your business risk exposure.
- About the top 10 threats to your business.
- Simple, practical steps to make cyberspace safer for you, your family and your friends.
- How to ensure your business complies with the upcoming and punitive Data Privacy laws coming into force in May 2018.
